Prince Charles's challenge

Seeking positive change

The Prince’s Foundation

As an architect, there is nothing more exciting than designing a new building and seeing it come to life. However, the process of transforming an idea into a reality involves much more than just the initial design stage. It requires careful planning, collaboration, and commitment from all stakeholders involved in the project. In this article, we will explore the steps involved in transforming a project from concept to completion and the role of architects in making that transformation possible.

1. Conceptual Design

The first stage of the project is the conceptual design phase, during which the architect and other professionals involved in the project work together to develop a preliminary design that meets the client’s requirements and goals. This stage involves creating sketches, models, and other visual representations of the proposed design.

2. Detailed Design

Once the conceptual design is approved, the next stage is the detailed design phase. During this stage, the architect and other professionals work together to develop a comprehensive design that includes all the necessary details, such as dimensions, materials, and finishes. This phase also involves creating technical drawings and specifications that will be used to guide the construction process.

3. Construction

The final stage of the project is the construction phase, during which the design is brought to life. This stage involves coordinating with contractors, ordering materials, and ensuring that the construction is carried out in accordance with the design and specifications.

In conclusion, the process of transforming a project from concept to completion involves many stages and requires the collaboration of many professionals. However, with careful planning and commitment from all stakeholders involved in the project, it is possible to achieve a successful outcome.
Launch of a new chapter at Thame

All Greater.com completed Thorpe’s joining new in the Wm. Balfour Pessimische Council. A team was prepared to move into this new building to deliver services to the local people. The building is an environmentally friendly and innovative structure, designed to be a beacon for the community.

The project proved a challenge for Greater.com’s site teams because the new library is not on the main road but on a quiet back street. The teams worked hard to ensure that the library was delivered on time and to the highest standard. The library is a community hub that will benefit the local people.

Three wings will each contain 10 en-suite bedrooms, including 10 en-suite bathrooms. Each wing will be self-contained and will provide a secure environment for people with dementia. The dementia facilities will include a dementia-friendly living room and private lounge, all linking to a shared communal area.

The design is all about making the building as familiar and small-scale as possible so that people can recognise it from the outside world. "Familiarity is very important," he said. "We want to create a feeling of comfort and security."

The entrance to the new care home is clad separately from the building body and forms a feature of the new building. The building will be built by Greswolde and the contract will be supervised by CDM Co-ordinator – WT Hills Ltd, Exeter. The project team includes BCAL Consulting, Wellingborough; SE – Cameron Darroch Associates; Portess & Richardson of Peterborough; and Gillam. "We are continuing to carry out research to discover where there is a greatest demand," he added.

The project is led by Principal Buildings Project Manager Paul Greaves. "We are looking into providing either a residential or a rehabilitation care facility for injured soldiers," added Paul Greaves. "We are looking to provide a new building that is designed to meet the needs of people with dementia and to provide a safe and secure environment."

The professionals in this project are: Paul Greaves, Principal Buildings Project Manager; Richard Gillam, CDM Co-ordinator – WT Hills Ltd, Exeter; SE – Cameron Darroch Associates; Portess & Richardson of Peterborough; and Gillam. "We are continuing to carry out research to discover where there is a greatest demand," he added.
